

AMIRALI ASKARI

Front-End Lead / Senior Software Developer

Vancouver, Canada • askariamirali99@gmail.com • 604-671-0235 • github.com/AmirAshvins

PROFESSIONAL EXPERIENCE

Front-End Lead / Senior Software Developer · BizKey Tech · BC · Feb 2020 — Present (Full-Time Jun 2025)

- **Sole architect and technical owner of 8+ interconnected B2B platforms** — ERP, CRM, CMS, IMS, HR, FMS, a dynamic QR/barcode system, and a ticketing platform — processing 7–10M+ transactions across an enterprise client base, built and maintained entirely in React (web) and Flutter (native mobile).
- **Architected a multi-tenanted ERP front-end of 150+ features and pages** using React, TypeScript, and modular design patterns, cutting development overhead by 40%; led teams of 2–3 engineers on focused builds (CRM, BizHR), coordinating front-end delivery alongside back-end developers end-to-end.
- **Grew from individual contributor to Front-End Lead:** mentored 6 interns over 6-month rotations across React and Flutter, conducted code reviews, identified skill gaps, and owned sole Jira operations — triaging multi-source inputs into structured sprints and enabling predictable, priority-driven delivery.
- **Led a full-scale i18n overhaul across ~1,000 files**, delivering a load-balanced EN/FR/ES translation architecture with locale-aware DateTime and Crisp integration, engineered so any new language ships within one working day — directly opening French-Canadian and Latin American markets.
- **Cut client onboarding from months to weeks** by co-developing accelerated workflows with the CTO; personally served as account manager for 2 of 4 enterprise clients, including a migration of 1M+ sales records and 2,000+ SKUs.
- **Shipped 4 additional high-impact products:** 'BizInventory' (barcode/QR IMS, live on both app stores), 'ZipPet.ca' (multi-platform e-commerce with PayPal and loyalty rewards), a Figma-inspired print template designer (60% faster iteration), and a Google Drive-inspired internal FMS.
- **Standardized a company-wide design system** with reusable components, dynamic theming, and adaptive color schemes — accelerating front-end cycles by 30% — and launched 3 corporate websites (BizKeyTech.com, CHTP.com, BizKey.ai) achieving sub-2s load times via code splitting and lazy loading.
- **Represented BizKey Tech at national conferences**, delivering product showcases to 200+ attendees across Canada, contributing to new partnerships and brand growth.

Software Developer Fardad Mana Development & Trade Group · Iran · Apr 2025 — Present (Full-Time, Remote)

- **Designed and deployed a proprietary agentic AI vendor discovery system** that replaced a manual, multi-week supplier sourcing process with a structured LLM pipeline — achieving company-wide adoption and becoming the standard R&D tool for every new import/export project.
- **Proposed and authored the company's internal software architecture** for all future web and mobile development, establishing stack standards and methodology; led full-stack delivery across back-end services, REST APIs, server infrastructure, and database optimization.
- **Consulted senior leadership on AI agent adoption and digital transformation strategy**, managed the company website (redesign, hosting, DNS, custom domains), and maintained professional English communication with international clients and partners.

EDUCATION

Computer Systems Technology Diploma (Predictive Analytics) — BCIT, Vancouver

- Graduated top of class with a 96% overall average; awarded the W. Cameron McKenzie Memorial Scholarship for academic excellence.
- Co-founded and led the BCIT Computing Club from inception to 400+ active members.
- Built instructor-endorsed capstone web applications in teams of 4–5, including a self-assessment platform and a Coursera-inspired learning hub.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Dart, Python, C#, C

Front-End: React, Redux, React Router, Vite, CRA, Flutter, Swift, Android, Ink (Terminal UI), MVVM, GetX, Bloc, Riverpod, SCSS, Emotion, Material UI, Tailwind CSS, Bootstrap, Stripe SDK, Apple Wallet / Google Pay (Tap to Pay), PayPal

Back-End: Node.js, Flask, Django, Entity Framework, REST, MQTT, Clean Architecture, MySQL, MS SQL, MongoDB, SQLite, IndexedDB, Agentic LLM design, LLM-integrated interfaces, i18next

DevOps & Tooling: Docker, GitHub Actions, Git, Jira, Trello, Agile, custom, G-Suite, Domain management
